- Wire: Available in 18”, 21”, 24”, 30”, and 36” lengths (30” is most common)
- Plastic: 18” and 24”
- Fiberglass: 18”

Effortless Installation with FT-12 Flag Tool

Our FT-12 Flag Installation Tool makes securing wire flags simple and efficient. Position the forked, hardened steel end of the tool near the flag's wire stake and press down, anchoring the flag securely in the ground. This tool can carry multiple flags, streamlining installation for large areas.

Need Enhanced Visibility?

For areas with high vegetation or situations requiring greater visibility, we offer 12" square flags on 6' fiberglass staffs. These larger flags are ideal for marking in challenging environments and can be printed on both sides for bilingual messaging in English and Spanish.

FT-12 Installation Tool

Our FT-12 Flag Installation Tool makes getting wire flags into the ground much easier. Simply lay the flag on the ground and position the hardened steel forked end 1" from the end of the wire stake. Push on the tool so the forked end goes into the ground a couple of inches. The result is that the short end of the wire stake bends back forming an anchor while securing the flag in place. The tool has the capability of carrying many flags.

Need More Visibility?

Our 12" square flags on a 6' fiberglass staffs solve the problem. These are helpful when needing to mark areas of high vegetation or when visibility is paramount. These flags can be printed on both sides for English and Spanish.
