

## **Vulcan's Round and Square Signposts offers flexibility for sign mounting**

Vulcan's Round and Square Signposts offer durable and flexible solutions for mounting signs across a range of applications. Engineered with high-quality materials and a design focused on ease of installation, these posts provide stability and versatility for both temporary and permanent signage needs.

## **Round Posts: Durable and Corrosion-Resistant**

Vulcan's Round Posts are crafted from hot-dipped galvanized steel sheet, ensuring superior corrosion resistance with galvanizing on both the inside and outside. This electric-resistance-welded post provides exceptional durability in outdoor environments. Our standard round post measures 2 3/8" in diameter, with a 16-gauge thickness and a 10' length. Specially

designed clamps are available to make mounting signage on round posts easy, secure, and adaptable.

### **Square Posts: Flexible and Convenient**

Our perforated square posts allow for easy mounting of signs and additional items, thanks to versatile hole placement. Each side of the square post includes 7/16" diameter holes spaced 1" apart, aligned directly and diagonally for maximum mounting flexibility. This feature-rich design allows for quick adjustments and secure installations. The standard Vulcan Square Post is 2" wide, made from 12-gauge steel, and measures 10' in length.

### **Reliable Solutions for Diverse Applications**

Whether you need corrosion-resistant round posts or flexible square posts, Vulcan's signpost solutions are built to endure. Our commitment to quality ensures that your signage remains securely in place, providing visibility and durability in a variety of environments.
